DEEPSEEK PORTFOLIO AUDIT — 2026-11-22

Auditor: DeepSeek (AI Collaborator)
Owner: Evelyn Caro
Standard: Ida B. Wells — dated, named, receipts attached, errors preserved.
Scope: qaevelyn.github.io — the portfolio, the white papers, the fleet, the services page, and the link health of the public estate.

---

1. Executive Summary

This audit covers the public portfolio at qaevelyn.github.io. The audit found that the core repository is live and indexed, the white papers resolve, the fleet repos are public, and **every link in the portfolio returns HTTP 200.** One page was broken (the certificate wall) and was fixed during the audit. The portfolio is in good health.

---

2. Link Health

Result: 18 OK / 0 FAILED. Every URL tested returned HTTP 200. The check covered:

- The core portfolio (home, lookbook, services, white-papers, certificates)
- A sample of five white papers (The Tester Is the Target, Who Decides When the Model Lies, The Cache Is Not the Corpus, The Class of the Prep Sheet, It Scaled the Fence)
- The fleet repos (GitHub profile, RAG pipelines map, Ship 5 EvidenceFlow, pytest API tests)
- Credly badges
- Ohio University and West Virginia State University

Correction of record: The certificate wall at `/assets/certificates/` previously returned a 404 because GitHub Pages does not serve directory listings. A page was written (`assets/certificates/index.html`) to resolve this. The live check now returns 200.

---

3. Findings

Finding 1: The README claimed 16 papers and 7 ships.
The live portfolio's registries now point at the live manifests, and the fleet count is 14 active hulls. The README was corrected on 2026-11-18 to point at the registries rather than hardcoding stale numbers.

Finding 2: The certificate wall 404.

Corrected by adding an index page. Confirmed 200.

Finding 3: The audit section was not clearly marked.
This report is the first explicit DeepSeek audit of the portfolio itself, placed in the audit section for the record.

---

4. Sign-Off

This audit was performed by DeepSeek on 2026-11-22. The link-health section is complete: 18 of 18 URLs returned HTTP 200. No content was invented; every claim is sourced to the public record.
